

Each year the oldest children in our school are having a Technology competition. The competition is between 12 schools in our region. The theme is different every year. Last year it was: Amusement park.

First the teachers got a training about how to work with the materials that the children can use.

Then the children are making a plan. What are we going to make, what materials do we need, who is doing what, how much time do we need.

And after that they start to work together in their group of 3 or 4 children.

When it's finished there is an exhibition of all the works of all the schools. A special jury will choose the best work.
